

Penetration Testing as a Service (PTaaS) Features

PTAAS IS NETSPI'S DELIVERY MODEL FOR PENETRATION TESTING

It enables you to simplify the scoping of new engagements, view testing results in real time, orchestrate faster remediation, perform always-on continuous testing, and more – all through the Resolve™ vulnerability management and orchestration platform.

Traditional Pentesting Companies

PTaaS

USAGE

Users	●	Unlimited
Vulnerabilities	●	Infinite
Integrations	●	 or now. <i>(available as an add-on feature)</i>

SCAN MONSTER™

Continuous external network testing	●	✓
Continuous web application testing	●	✓

VULNERABILITY MANAGEMENT

Live vulnerability reporting	●	✓
Unlimited vulnerability hosting	●	✓
Vulnerability deduplication	●	✓
Risk scoring	●	✓
Custom severities	●	✓
User assignments	●	✓
Customer remediation SLAs	●	✓

PROGRAM MANAGEMENT

Dedicated project manager	✓	✓
Self-service pentest scoping	●	✓
Program Management Dashboard	●	✓
Access to a NetSPI Managing Director	●	✓

SECURITY TESTING

Manual verification of findings	✓	✓
Asset discovery	✓	✓
Real-time communication with NetSPI	●	✓

DELIVERY & REMEDIATION

PDF/CSV report	✓	✓
12-month Resolve access	●	✓
Vulnerability analysis via Data Lab	●	✓

PENETRATION TESTING AS A SERVICE (PTAAS)

Better Manage Your Vulnerabilities with PTaaS

Manage Findings and Remediation

All vulnerabilities are correlated, deduplicated, and accessible directly through Resolve™ with the ability to search, sort, query, and filter your data. All vulnerability findings are aggregated in real-time and include a detailed description, severity rating, impact analysis, and remediation instructions. It also includes hand-written reproduction steps to guide you to reproducing and remediating your vulnerabilities.

Program Management

The Program Management Dashboard houses all of your NetSPI engagements and reports on the status and results of your penetration tests. The dashboard also highlights the efficacy of each testing method (manual vs. Scan Monster vs. traditional single network scanners). Resolve enables clients to collaborate directly with their testing team on specific assessments, findings, instances, assets, and more. It also enables direct communication with your project manager to request additional assessments or make adjustments to upcoming assessments. This centralized communication reduces inefficient e-mail correspondence and streamlines communications among all stakeholders.

Reporting and Trend Analysis

Generate your own PDF reports on-demand. Access fully detailed vulnerability reports as well as executive summaries detailing at a high-level the results of the engagement. With Resolve you gain year-round trend analysis and access to dashboards tracking the state of your remediation efforts for all vulnerabilities.

Continuous Penetration Testing

As a PTaaS client, you can enhance your standard penetration tests with recurring touchpoints throughout the year. In addition to your deep-dive manual penetration tests, NetSPI can conduct additional testing in the time between your tests. PTaaS rolls these up into applications and networks, giving you all-time views of your findings, irrespective of the assessment they were found on.

Next Generation Pentest Delivery

- Unlimited users
- Infinite vulnerabilities

SCAN MONSTER™

- Continuous external network testing
- Continuous web application testing

VULNERABILITY MANAGEMENT

- Live vulnerability reporting
- Unlimited vulnerability hosting
- Vulnerability deduplication
- Risk scoring
- Custom severity ratings
- User assignments
- Custom remediation SLAs

PROGRAM MANAGEMENT

- Dedicated project manager
- Self-service pentest scoping
- Program Management Dashboard
- Access to a NetSPI Managing Director

SECURITY TESTING

- Manual verification of findings
- Asset discovery
- Real-time communication with NetSPI

DELIVERY & REMEDIATION

- PDF/CSV report
- 12-month Resolve™ access
- Vulnerability analysis via Data Lab

Remediation Assignments and SLAs

PTaaS gives you the ability to assign SLAs and remediators to all vulnerabilities and manage them through the remediation life-cycle. Additionally, you can supplement NetSPI's assigned severity with your own rating allowing further customization of the vulnerability management process.

Persona Dashboards and Unlimited Access

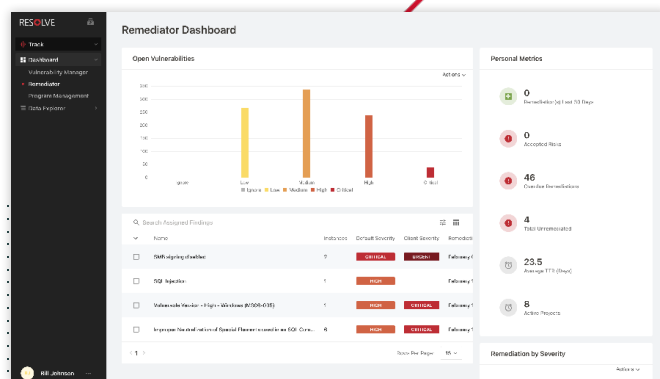

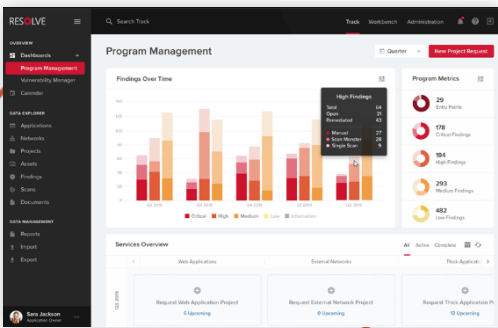

PTaaS persona dashboards provide different data points and summaries based on the users role. It allows you to customize how each user views and digests the penetration testing data. Unlimited user counts allow you to add access for anyone (CISO, SOC, app owners, vulnerability managers, developers, etc.).

Custom Severities

NetSPI's severity rating may differ from an organization's internal vulnerability rating. To further customize Resolve, PTaaS allows you to define assigned severity for all vulnerabilities.

Data Analytics

Using the Data Lab query tool you have the power to create and save custom queries allowing you to interrogate your vulnerability data from multiple perspectives.

Want More?

Ticketing System Integrations:

Ticketing system integrations are available for an additional cost. With bi-directional Service Now and Jira system integrations, updates on each ticket will reflect in Resolve to ensure you have a single source of truth for vulnerability management.

AppSec as a Service:

NetSPI's AppSec as a Service offering helps you manage multiple areas of your application security program using PTaaS as the foundation. AppSec as a Service combines the capabilities of our PTaaS platform, Resolve™, and our leading consulting services to support you in building and managing a best-in-class application security program.
